

WHAT IS ECAS?

- While ECES provides the structure and definition for a standardized work and cost breakdown format, there is still a need to collect, analyze, maintain, and distribute this data.
- Environmental Cost Analysis System (ECAS) is being developed to accomplish this task.
- ECAS is a web-based system developed by the ACE Team in coordination with NETL to collect and analyze cost data.
- ECAS will perform searches, and readily provide reports and data needed for future estimating, project planning, and benchmarking.
